*The psychology of the Rich...*

For most of us, the idea of murdering over 100 million people for the sake of profit is incomprehensible. The Cancer Industry with its 125-billion-dollar annual prize might be guilty of similar crimes.

Take this pdf to your doctor, they have some explaining to do!

## Side effects of Chemotherapy

- Decreases red blood cells
- Decreases white blood cells
- Decreases blood platelets
- Causes bone death
- Causes loss of bone mineral density
- Toxic to the brain
- Causes long term impairment of concentration, forgetfulness, and slower thinking; termed "chemo brain"
- Causes altered consciousness
- Causes degeneration of white matter in the brain
- Causes nerve damage
- Causes seizures
- Causes paralysis
- Causes stroke
- Causes diarrhea
- Causes painful inflammation and ulceration in the digestive tract
- Causes significant intestinal damage in both jejunum and colon
- Reduces grip strength
- Causes muscle dysfunction and a loss of overall strength
- Causes severe vision loss and altered colored vision
- Causes complete blindness
- Causes hair loss
- Impairs wound healing
- Causes severe to profound hearing loss
- Causes chronic ringing of the ears
- Causes damage to the heart
- Causes heart disease
- Causes heart failure
- Causes heart attacks
- Causes long term immune system damage
- Exacerbates existing hepatitis B virus

- Reactivates hepatitis C infections
- Impairs anti-tumor immune response
- Causes kidney failure
- Causes liver injury
- Causes lung disease
- Decreases emotional and social function and increased distress
- Causes depression
- Causes anxiety
- Causes severe dental cavities
- Causes dry mouth
- Causes fungal infections
- Causes painful inflammation and ulceration in the mouth
- Causes a diverse spectrum of oral changes that generally are attributed to immunosuppression and bleeding tendencies.
- Causes neuropathic pain, burning, coldness, pins and needles sensation, numbness, and itching
- Pain remains one year after treatment
- Causes difficulty swallowing
- Causes nausea and vomiting
- Causes an altered taste sensation
- Causes migraine headaches
- Causes infertility and premature ovarian failure in women
- Causes absence of menstrual cycle
- Causes menopausal symptoms
- Damages sperm and testicular tissue
- Reduces reproductive organ weight, sperm count and sperm motility
- Causes a significant decline in serum testosterone
- Causes dermatitis, itchiness, red skin, and rash
- Reduces sleep quality
- Blunts thyroid function
- Impairs thyroid hormone synthesis and secretion from the thyroid gland
- Alters thyroid hormones after each session of chemo
- Increases free radicals
- Increases cortisol
- Increases adrenaline
- Increases prolactin

- Increases estrogen
- Increases tumor necrosis factor alpha
- Increases interleukin-6
- Increases interleukin-8
- Increases nuclear factor-kappa b
- Increases prostaglandins
- Increases nitric oxide
- Increases vascular endothelial growth factor
- Increases epidermal growth factor
- Increases lactic acid
- Increases serotonin
- Increases histamine
- Increases high-mobility group box 1 protein
- Chemotherapy causes blood in the urine
- Causes painful urination
- Causes muscle wasting
- Sever loss of body weight is a frequent cause of death in cancer patients and is exacerbated by chemotherapy

## Side effect of Radiotherapy

- Damages the spinal cord
- Causes bone fractures
- Causes bone and joint degeneration
- Lowers IQ
- Impairs memory, attention, and executive function
- Increases lifetime risk of having a stroke
- Causes vision loss
- Causes complete blindness
- Causes complete hair loss
- Slows wound healing
- Causes immediate deafness in 45.71% of patients
- Induced hearing loss continues to worsen over time
- Causes micro-vascular damage to the heart
- Weakens the heart, blood vessels surrounding the heart and narrows arteries
- Significantly increases mortality from cardiovascular death more than 15 years later
- Suppresses the immune system
- Inhibits anti-tumor immunity
- Significantly increases chance of infection
- Causes immediate inflammation
- Causes kidney failure
- Causes liver damage
- Causes liver failure
- Causes mental disorders, anxiety, depression and distress
- Causes significantly worse mental health before, during and one year after radiotherapy
- Radiation induced cachexia causes primates to lose as much as 50% of skeletal muscle
- Causes tooth decay
- Causes jaw and bone death
- Causes permanent salivary gland dysfunction

- Causes oral discomfort, oral mucositis, changes in taste, increased oral infections, and difficulty swallowing
- Causes post-traumatic stress disorder
- Causes fatigue in up to 90% of patients
- Causes intractable untreatable nausea, vomiting, and headache
- Causes unpredictable taste and smell changes in 48% of patients, some had a stronger sweet taste, some had a stronger salt taste and some had a weaker sense of smell
- Causes 64% of patients to rely on tube feeding as their primary means of food intake
- Considerably impairs overall quality of life
- Causes increased incidence of numerical sex chromosomal abnormalities and high risk for reproductive and genetic diseases
- Causes a high percentage of infertility in cervical and testicular cancer patients
- Causes sexual dysfunction in 78% of women treated for cervical cancer
- Causes testosterone deficiency
- Causes erectile dysfunction in 93.9% of men after prostate irradiation
- Causes thickening and scarring of skin and connective tissues
- She-fitting fluoroscopes cause dermatitis with ulceration of the foot
- Causes sleep problems in nearly half of patients
- Causes severe obstructive sleep apnea
- Causes degeneration of voice and speech
- Causes hypothyroidism in approximately 53% of patients
- Increases free radicals
- Increases cortisol
- Increases adrenaline
- Increases estrogen
- Increases prolactin
- Increases nitric oxide
- Increases vascular endothelial growth factor
- Increases tumor necrosis factor alpha
- Increases interleukin-1 beta
- Increases interleukin-4
- Increases interleukin-6
- Increases interleukin-8

- Increases nuclear factor kappa b
- Increases prostaglandins
- Increases lactic acid
- Increases stem cell production
- Increases histamine
- Increases serotonin
- Increases high-mobility group box 1 protein
- Causes involuntary urination in women and men
- Radiotherapy for rectal cancer causes long term incontinence and major disturbances in bowel function

A Quote to Remember...

*"...I wouldn't have chemotherapy and radiation because I'm not interested in therapies that cripple the immune system, and, in my opinion, virtually ensure failure for the majority of cancer patients" Dr. Julian Whitaker, M.D.*

## The Cancer Industry exposed

A 2015 study found that between the years of 1995-2013, the average price of new cancer drugs increased by an average of \$8,500 which is 10% per year. Some of the newest cancer drugs can cost patients over \$150,000 for just one year of treatment.

The production costs have not increased, and they are not any more effective in treating cancer than the old ones. Why do they do this? Just because they can...

Another really horrible way they boost chemo drug earnings was exposed in a 2016 study called "Overspending driven by oversized single dose vials of cancer drugs." They created a one size fits all vial with way more than most patients ever need so they can generate an additional three billion every year.

In the 1950's, a man named Charles Tobey Jr. was diagnosed with cancer and told he had less than two years left to live. He refused the treatment offered to him and discovered an alternative approach "The Lincoln Treatment." This treatment consists of taking viral and bacterial samples from patients, culturing them and then administering them back to the patient via a nebulizer. Dr. Lincoln never charged more than \$5 for this service. According to Toby it worked, and he saw many people begin to get well.

Since the U.S. health authorities refused to investigate the Lincoln treatment Toby's father U.S. Senator Charles Toby launched an official investigation into the cancer establishment. Investigator Benedict Fitzgerald of the U.S. Interstate Commerce Commission. His findings later called "The Fitzgerald Report", was presented to the U.S. Senate in 1953. They took no action and the fact it ever happened stayed out of the public eye, hidden! In 2007 his investigation was finally made public!

*"My investigation to date should convince this committee that a conspiracy does exist to stop the free flow and use of drugs in interstate commerce which allegedly has solid therapeutic value. Public and private funds have been thrown around like confetti at a country fair to close up and destroy clinics, hospitals, and scientific research laboratories which do not conform to the viewpoint of medical associations.*

*There is reason to believe that the American Medical Association had been hasty, capricious, arbitrary, and outright dishonest...in an interstate conspiracy of alarming proportions. Behind*

*and over all this is the weirdest conglomeration of corrupt motives, intrigue, selfishness, jealousy, obstruction and conspiracy that I have ever seen.”*

*Benedict F. Fitzgerald, Jr., The Fitzgerald Report*

Let us not forget about the treatments that are used to detect cancer. They tell you that early detection can save your life. Upon further research early detection sometimes can be the cause of cancer. Many of the methods used cause cancer, so tell me how are they helping the situation? They are not but as long as your insurance continues to pay who cares, right?

They were able to set up a scare tactic system in which cancer mortality statistics are calculated using death certificates, even unbiased scientist would draw a favorable conclusion for cancer screening programs and orthodox treatments. Concealing the truth about their dangers and temporarily circumventing will soon be the cancer industry's inevitable collapse. When a doctor decides to speak out against the screenings, he is called ignorant, careless, and on a crusade against screenings. Experts then will urge the public to ignore the reports.

In 2016 a panel of doctors according to The Journal of the American Medical Association said “although tumors have been diagnosed as cancer and treated for decades, they have been found to never actually produce symptoms or any problems at all for patients when left untreated. Here's the thing...you may have a tumor that a surgeon knows is low grade and does not need to be removed but due to the guidelines the entire thyroid gland must be removed and the patient needs to be treated with radioactive iodine. Who comes up with this stuff?? Not the doctors, surgeons, nurses, or anyone on the front end it is always the higher up's in the office make the rules. These people do not even experience a typical day in patient care, yet they can tell you how to do your job.

The most astounding thing about the prostate cancer industry and breast cancer industry is that even without treatment, almost no men diagnosed with prostate cancer actually die from the disease. Many women undergo the horrible removal of their breast unnecessarily because virtually no women diagnosed with ductal carcinoma will die if left untreated.

My grandma was diagnosed with breast cancer, had the surgery, it went to the other breast, had another surgery, then it went to the lungs. Every time they cut into her the cancer spread! Every time they administered chemo, we watched her get weaker and weaker until we were praying for her pain to cease. Knowing I could have stopped that torture is why I do what I do today. Nobody should have to watch their loved one die because the medical field wants to use expensive chemo to literally remove any fighting chance they had.

Peter Gotzsche had a critical message for the world, but nobody was listening. Many of the occult tumors detected during breast and prostate cancer screening may never become advanced enough to harm patients. As a result, thousands of people who would have remained perfectly healthy and lived a long life have now become what is know as “a cancer patient.” It is a biological fact of life that we cannot avoid getting cancer as we age and many middle-aged people will pass away with cancer unaware, never showing any symptoms as a result.

A huge number of experiments are being conducted by scientists and are showing if we avoid harming the body with destructive treatments, many cancers may ultimately undergo spontaneous regression. Given that only about 2 percent of patients survive 5 years following chemotherapy, simply by rejecting harmful orthodox cancer treatments, survival rates can be increased by 5, 10, even 25 times. Now I want you to think about the survival when the treatments are accompanied by the use of medicines that are both safe and effective!
